Sketch 3	
Adobe Animate	Social Media Marketing
Adobe Fireworks	
SVG	
SVG Optim	
Corel Painter	
Cinema 4D	
Craft	
inVision	
Marvel App	
Fluid UI	

Experience

Isophex - Frontend Developer
March 2015 - Present

Web design agency creating websites built on the latest web technologies to achieve a tailored user experience

● Frontend Designer/Developer:

As a Frontend Designer/Developer I design, develop, and deploy web based projects. I follow a well structured approach, starting with an emphasis on creating active proto-typing and usability exploration to actively test solutions. With a strong design foun-dation, my hands-on development skills allow me to translate design into function. I am very focused on efficient work flow, and disciplined in using the latest develop-ment tools and technologies. I understand the need for strong QA. I am responsible for the overall user experience, performance and technical success of the project.

Helios Intellectual Property - UI/UX Designer
March 2016 - Present

Helios Intellectual Property is a legal services company bringing innovative solu-tions to IP management.

● UI/UX Designer:

As a UI/UX designer consultant, my job is to prototype, user test and collaborate with developers on aspects of an application's Frontend. Incorporating all the latest design trends and patterns in the final solution, I can work alongside a developer to design a system that both looks good and operates intuitively. Knowing the technology side has allowed me to effectively design interfaces and user experiences that can be deliv-ered to a developer and be implemented for production.

Projects include: the Helios IPM main website (initial and redesign), Country Law Library Wiki.
